

BUND BREACH ALARMS FROM NIPLAST®

As a manufacturer of industrial chemical storage tanks for over 40 years, Niplast understands the importance of tracking and recording tank contents.

As importantly, but sometimes over-looked, is the monitoring of any loss of contents from the tank into the bund. This might be from a tank over-fill, or equipment breach but whatever the cause, plant operators need to know. NIPLAST® bund breach alarms make sure they do.

NIPLAST® bund breach alarms have one primary objective and that is to alert for any bund leaks. The NIPLAST® bund breach alarm can alert the user a number of ways including sounding an alarm, flashing a beacon, illuminating the relevant area on the alarm's screen, activating plant telemetry via 4 to 20mA signal, email or 'phone call.

Standard Features include:

- 90db Sounder
- IP55 Weatherproof
- Flashing orange beacon
- Various input voltages 12v, 24v, 110v & 230v
- Test and alarm mute functions
- LED lights to signal a problem.
- 4 to 20mA signal options
- Email transmission options
- Telecommunication options inc text, 'phone call
